

cpmw

This is a small application that controls GD Workshop from within a Makefile.

To use the cpmw in a DOS box, enter :

```
cpmw [filename] -dsr param
```

Filename is optional.

If a filename is specified it is loaded when GD Workshop starts up.

If no filename is specified then GD Workshop starts up with no project loaded.

- d** open/close
 This controls the door button and issues an open/close message.
- s** CD-ROM/GD-M
 This controls the CD-ROM/GD-M switch and switches between the CD-ROM and emulator.
- r** update files to GD-M
 Instructs GD Workshop to update to the GD-M any changed files. It's like selecting the Link Check option in the File menu and then selecting Update to emulator.
